

# Thermocraft Solar Panels

- NOW for:
- Swimming Pool Builders
  - Solar Dealers & Installers
  - Distributors

Thermocraft Solar Panels are marketed to Solar Dealers & Installers through direct purchase from the factory. Solar Dealers can set up a resell agreement that is hassle free.

Pool & Spa Distributors can purchase direct from the factory along with other electrical and plumbing products. Pool Builders can purchase and install the entire system themselves or subcontract to solar installers or other trades for roof installation.

Purchase and installation is easy. The assembly and installation hardware are all factory coordinated and in ONE BOX. Thermocraft System Installation kits are configured for the number of panels required, and are available in 6, 8, 10, & 12 panel kits. Therefore, if the job requires 6 panels, simply purchase 6 panels and one 6-panel system kit.

Simply procure the required riser pipe and 3 way valve and/or any automation products desired.

Thermocraft Solar Panels are easy to install. Very strong, durable Nylon 2-piece header clamps grip the header pipe, not the band clamp on the coupling. This means that once the chalk line is established for placement, install the bottom portion of the header clamp, then set the panel into it and secure the top portion. Durable, easy installation.

The adaptor portion of the panel includes a reinforcing ring so that the band clamp does not squeeze the header pipe regardless of how extreme the heat or tight the clamp is applied.

Each System Kit contains Installation Instructions and Warranty.

#### 6 Panel System Kit includes:

- 13 Flexible Couplings
- 26 Stainless Steel Band Clamps
- 12 Header Clamps
- 3 Solar Adapters
- 1 90 Deg. Elbow

Note: The quantities of certain items will change according to the number of panels the kit is designed to accommodate.

CMI also manufactures replacement parts:

Straight Solar Adapters  
Couplings

Shipping:

Panels can be shipped in Full Truck with Freight paid by CMI, or less Than Truckload. Additionally, single jobs of 4-12 panels are shipped in custom

made pallet boxes. These pallet boxes allow the panels to be shipped economically and protected, with the system kit also inside. Since the panels and hardware are in one protective box, it can be shipped directly to the distributor, installer's warehouse, or jobsite.

Contact CMI today and start increasing profits, helping customers save money, and keep the environment health
